

Q.1) Write steps to install oracle.
(For Windows):

- Goto <https://www.oracle.com/database/technologies/oracle-database-software-downloads.html>.
- Download according to your OS & architecture. By clicking and agreeing to oracle license agreement.
- Unzip the download file using winRar, 7zip etc.
- Double click on setup-exe.
- Skip "configure security updates", click on next.
- Choose your system class as desktop, click next.
- Choose path and set up username & password click on next.
- Oracle will now check requirement & dependencies after it is done click on next.
- Now oracle will install some additional file on your system. After that is done click on next.
- allow firewall which will comes as popup.
- Oracle will download additional tools, let it Install, after it is done click on finish, then on close.
- Now test your installation by opening command prompt as administrator.
set oracle_sid = (username)
sqlplus/as sysdba
if the text changes to "sql >" then Oracle is installed.

Q.2) ER Diagram for Library Management.
